

Phoenix™ Tips and Tricks

Tips for Phoenix™ WinNonlin® 1.1, Phoenix Connect™ 1.1 and Phoenix NLME™ 1.0

Tip 2: How to export the same graphic or worksheet from different models to Microsoft Word.

To export to Word directly from Phoenix, **select File>Word Export**. Select an item in the tree (i.e., you must not just check the box but actually highlight the item); the bottom of the screen will then have the option to select all objects with that name. This is a useful step, for example, to avoid having to select all objects with the same name if many models were run.
